

KAMBIZ HOSSEINI

Team Lead | Solution Architect | Senior Software Engineer

Dublin, Ireland | +353 87 434 7453 | hosseini.kambiz@gmail.com | linkedin.com/in/kambiz-h

PROFESSIONAL SUMMARY

Solution Architect, Team Lead and Senior Software Engineer with 15+ years designing Java-based enterprise systems, cloud-native platforms and automation solutions across banking, payments and telecommunications. Nine years of customer-facing, vendor-side architecture delivery to financial institutions, defining target architectures, integration patterns and technical governance for mission-critical payment platforms. Deep expertise in Kubernetes, microservices, event-driven architecture, API design and Infrastructure as Code, with a track record of leading architecture reviews, evaluating technology trade-offs, modernising legacy systems and communicating design decisions to senior technical and business stakeholders.

KEY SKILLS

Architecture: Solution & Enterprise Architecture, Microservices, Domain-Driven Design, Event-Driven Architecture, API Design & Integration Patterns, Distributed Systems, Cloud-Native Architecture, Architecture Governance & Reviews

Languages: Java (Core, 8+), Go, Groovy, Bash

Frameworks: Spring (Boot, MVC, Security), Hibernate/JPA, Grails, Apache Camel, Apache Kafka, Akka

Cloud & Platform: Kubernetes (incl. Operators/CRDs), Docker, AWS, Terraform, Ansible, CI/CD, Infrastructure as Code

Data & Middleware: Oracle, DB2, IBM WebSphere, JBoss, Tomcat

Security & Compliance: Secure coding, penetration-test remediation, PCI-aligned delivery, CISSP training

Ways of Working: Agile/Scrum, Jira, Confluence, Git, stakeholder engagement, technical mentoring

WORK EXPERIENCE

Senior Software Engineer – API Gateway Onboarding Platform

Jun 2025 – Present

Performing Solution Architecture responsibilities

Mastercard

Dublin, Ireland

- Senior Software Engineer acting as Solution Architect within Mastercard's Platform Enablement team, responsible for the API Gateway Onboarding Platform, translating platform requirements into scalable, secure and fully automated onboarding workflows
- Design and implement Kubernetes Operators for Mastercard's Kubernetes Control Plane using Spring Boot, the Java Kubernetes Client and Custom Resource Definitions (CRDs).
- Define orchestration architecture integrating Ansible Automation Platform, Terraform Enterprise, Bitbucket, Chef and Kubernetes for infrastructure provisioning, configuration and API gateway lifecycle management.
- Lead architectural decisions for long-running, event-driven workflows: durable state management, approval gates, idempotency, retry semantics and failure recovery across multi-day processes.
- Define platform architecture for pre-flight validation, inventory synchronisation and auditable deployment pipelines, aligned with enterprise security and compliance standards.
- Produce architecture proposals with Principal Engineers and Architects, evaluate technical trade-offs and present designs to engineering managers and cross-functional stakeholders to drive consensus.
- Provide design reviews and technical leadership to engineering teams implementing platform automation.

Security Master / Senior Software Engineer

Mar 2022 – Jun 2025

GlobalLogic (Ericsson Solutions)

Ireland

- Developed cloud-native components for Ericsson's containerised ENM (cENM) network management product, decomposing legacy applications into Kubernetes-deployed services and reducing deployment times significantly.
- Implemented testing strategies achieving 90% code coverage, materially reducing post-deployment defects.
- Team Security Master: enforced secure-coding standards, led security-focused code reviews and drove vulnerability remediation across releases.
- Delivered 24/7 production support for the CBRS solution across the USA and Canada at 99.9% uptime.
- Mentored junior engineers on design, testing and Kubernetes practices.

Technical Lead / Solution Architect — Banking & Payment Solutions
iMocha Sdn. Bhd.

Apr 2013 – Feb 2022
Malaysia

- Led customer-facing solution architecture for enterprise banking and payment platforms (FPX, ePayroll, Direct Debit and high-volume transaction systems) delivered to financial institutions including CIMB Bank, Bank Rakyat and Bank Islam.
- Translated bank and business-stakeholder requirements into scalable, secure, highly available architectures; defined application architecture, integration patterns, database design and deployment strategy.
- Modernised legacy Java/Grails applications, including framework upgrades and logging-stack migration (Log4j 1.x to 2.x via the API bridge) with zero functional regression.
- Designed high-availability and disaster-recovery architectures to meet strict banking SLAs and regulatory requirements.
- Led technology selection, comparative product evaluations, architecture reviews and technical governance across multiple concurrent customer implementations.
- Architected performance-optimisation initiatives for high-volume transaction processing, including database query and locking analysis on Oracle and DB2.
- Designed secure integrations with core banking systems, payment gateways, HSMs (Thales payShield, Luna Network HSM) and enterprise middleware in line with financial security standards.
- Served as primary technical authority for major customer implementations and production incident resolution.

Software Developer
South School & Freelance,

Apr 2010 – Feb 2012
Australia

- Developed and delivered Java-based projects with distributed international teams to tight deadlines.

Technical Lead & Head of Technical Support
TMICTO,

Apr 2005 – Feb 2010
Iran

- Consolidated 30+ Solaris servers through virtualisation, reducing maintenance costs.
- Led support for 150+ Solaris servers and databases.
- Established a new Helpdesk function.

EDUCATION

Master of Computer Science (Information Security) — Universiti Teknologi Malaysia (UTM)

Master of Computer Science — Swinburne University of Technology

Bachelor of Computer Science — Tehran Azad University
